

PROJECTS

Room Rental Services

- Developed a website using Python with Django framework where implemented a secure user authentication system allowing users to register and log in to the website.
- A feature where users can view available rooms categorized by preferences such as individuals, couples, and family.
- Provided functionality for users to manage their accounts, including the ability to change their login password for security.

Travel Atomation System

- Developed a comprehensive 'Travel Automation System' using PHP and MySQL. Users can sign up and book location from various categories such as religious, adventures, and holiday etc.
- They also choose their preferences including individual, couples, and family packages.
- User have the ability to provide feedback on the services they receive, Administrators can manage user bookings, including overseeing locations and scheduling for specific date and times.

Resume Maker

- Developed a user-friendly website using HTML, CSS, and JavaScript with local storage capabilities. This web application allows users can enter details information about their profile, education, experience, training, skills and additional details.
- Utilizes local storage to save user data, ensuring that information is retained even if the browser is closed or refreshed. After entering all required details, the application generates a formatted and professional resume, ready for download or printing.
